

## VIRTUAL SEMINAR

Thursday, 14.10.2021 at 13:00

### **Nano vs. quantum technology**

**Asst. Prof. Matej Komelj, Jožef Stefan Institute**

Although the birth of quantum mechanics, more than hundred years ago, paved the way towards global digitalization and implied drastic changes in everyday life, the term quantum technology was conceived only recently. Is it just another achievement of phraseology, or it may trigger the next technological revolution? The question will be addressed in a popular way by covering the essential aspects of both, the new and the old paradigms.

Kindly invited.
